Phylogeny

Biology

A tree generating app for Bioinformatics

By: Sal Jahromi

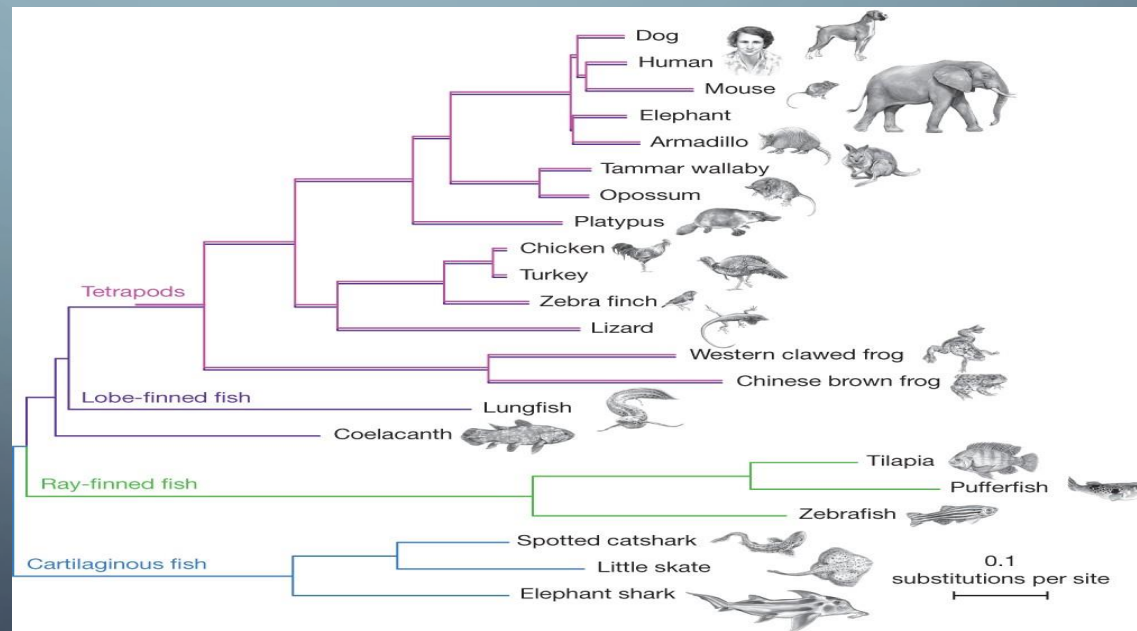

FASTA FILES

This app uses FASTA files to generate phylogenetic trees.

FASTA = A file format used by bioinformaticians and biochemists, which contains nucleotide or amino acid sequences, along with the names of the hosts.

```
>Cat
ACTCCGTCGAGCGCAAGCT
>Bird
ACTAAACCTTTCGGTGAGTCC
>Bat
ACTCGGGCCACTACTACTTTCAA
```

Phylogenetic Tree = A tree diagram which represents the evolutionary relationship of organism with each other and their common ancestors

<https://plato.stanford.edu/entries/phylogenetic-inference/>

APP BUILT IN R-SHINY

- Why R?

- R is a very powerful tool for data analysis.
 - lots of built-in libraries to read and analyze FASTA files with.
 - Excellent plots (trees, graphs, charts, etc.)

- R Shiny?

- R Shiny is used to build UI apps based on R
 - Makes for a user-friendly interface

THE APP

bioNphylo

Inputs

Sequence Type

☒ Amino Acid

☐ Nucleotide (DNA)

Drag and drop here

Browse...

No file selected

Input:

MSA Method:

ClustalW

Tree Reconstruction Method

UPGMA

Bootstrap Iterations

500

☐ Show File Sequences

☐ Bootstrap Tree

Generate Tree!

Output Results

Purpose : To depict the following coronavirus types in a phylogenetic tree, to better understand their evolutionary relationships.

- SARS CoV1 E2
 - SARS CoV1 AS
 - Pangolin coronavirus
 - Bat coronavirus
 - SARS-CoV-2 iso 1
 - SARS CoV2 Wuhan-Hu
 - Camel MERS-CoV
 - MERS Betacoronavirus England 1
 - MERS coronavirus
- 

To accomplish this, the spike protein amino acid sequence of the virus types is collected within a FASTA file.

-Sequences were collected from the NCBI website.

Spike.fa

Amino acid sequence of the spike proteins of the coronavirus types in this study

Default screen on start-up

To select the type of sequence the FASTA file holds

Since “Spike.fa” holds amino acid sequence, we will leave that radio button selected

The screenshot shows the bioNphylo web application interface. The top navigation bar is green with the text "bioNphylo" and a hamburger menu icon. The main content area is divided into two panels. The left panel, titled "Inputs", contains several sections: "Sequence Type" with two radio buttons, "Drag and drop here" with a "Browse..." button and "No file selected" text, "Input:" section with "MSA Method:" and "Tree Reconstruction Method" dropdowns, "Bootstrap Iterations" input field, and two checkboxes. The right panel, titled "Output Results", is currently empty. Annotations include a blue box around the "Sequence Type" section and a blue arrow pointing from the text "To select the type of sequence the FASTA file holds" to the "Amino Acid" radio button. Another blue arrow points from the text "Since 'Spike.fa' holds amino acid sequence, we will leave that radio button selected" to the same radio button.
